

Keep your ductless
heating and cooling system
SIMPLE.

D6 Pro Wi-Fi
Ductless Controller

**Ask your HVAC contractor about adding
a Honeywell D6 Pro Wi-Fi Ductless Controller.**

If your ductless system came with a button-loaded remote control, it's time to replace complexity with simplicity. The D6 Pro Controller works like a thermostat. Set the mode to cool, heat, or auto. Set the temperature you want. And you're done – simple!

Your ductless heating and cooling system isn't complete without a Honeywell D6 Pro Wi-Fi Ductless Controller.

- Wi-Fi status
- Mode icons: Heat / Cool / Auto
- Actual room temperature
(displays the set point when you change the temperature setting)
- Change mode or turn system off
- Change temperature setting up or down

D6 Pro unit depth is 2/3". When mounted to the table top stand, overall depth is 2 1/4". Optional wall mount included.

Accurate temperature settings

Most ductless systems sense the room temperature at the ductless unit, high up on a wall. Since heat rises, the temperature will be warmer closer to the head unit - probably not what you want. The D6 Pro Controller does its own temperature sensing, down where you are. So the temperature you set is the temperature you get.

Anywhere access with the Honeywell Home app

The D6 Pro Controller's Wi-Fi connection links it to the Honeywell Home app on your smartphone or tablet. The app gives you control of your ductless system from just about anywhere: work, beach, cabin, or snuggled into bed. You can also control your ductless system through an Amazon Alexa-enabled device (like the Amazon Echo), or the Google Home smart speaker.

Scheduling, geofencing, and more

The Honeywell Home app helps you get the most out of your ductless system. You can schedule temperature changes throughout the day. Or set a geofence that starts warming or cooling your space as you head home. The app alerts you when the room temperature or humidity is too high or low, reminds you when to clean the air filters, and even sets the controller's display brightness.

Ask your contractor about simplifying your ductless heating and cooling system with the Honeywell D6 Pro Wi-Fi Ductless Controller.
